\* Paid up Equity Capital

**Note:**

There is no capital deficiency in any subsidiary, which is not included in the regulatory scope of consolidation.

There are no restrictions or impediments on transfer of funds or regulatory capital within the banking group.

**II. CAPITAL ADEQUACY**

The Bank is subject to the capital adequacy guidelines stipulated by RBI, which are based on the framework of the Basel Committee on Banking Supervision. As per Basel III guidelines, the Bank is required to maintain a minimum Capital to Risk Weighted Assets Ratio (CRAR) of 9% {11.5% including Capital Conservation Buffer (CCB)}, with minimum Common Equity Tier I (CET1) of 5.5% (8% including CCB) effective 1<sup>st</sup> October 2021. These guidelines on Basel III have been implemented on 1<sup>st</sup> April 2013 in a phased manner. The minimum capital required to be maintained by the Bank for the half year ended 30<sup>th</sup> September 2024 is 11.5% with minimum Common Equity Tier 1 (CET1) of 8% (including CCB of 2.5%)

An assessment of the capital requirement of the Bank is carried out through a comprehensive projection of future businesses that takes cognizance of the strategic intent of the Bank, profitability of particular businesses and opportunities for growth. The proper mapping of credit, operational and market risks to this projected business growth enables assignment of capital that not only adequately covers the minimum regulatory capital requirement but also provides headroom for growth. The calibration of risk to business is enabled by a strong risk culture in the Bank aided by appropriate, technology-based risk management systems. As part of the Internal Capital Adequacy Assessment Process (ICAAP), the Bank also assesses the adequacy of capital under stress. A summary of the Bank's capital requirement for credit, market and operational risk and the capital adequacy ratio as on 30<sup>th</sup> Sept 2024 is presented below:

(₹ in millions)

Capital Requirements for various Risks	Amount
<b>CREDIT RISK</b>	
Capital requirements for Credit Risk	
- Portfolios subject to standardized approach	1,155,340
- Securitisation exposures	
<b>MARKET RISK</b>	
Capital requirements for Market Risk	
- Standardised duration approach	61,102
- Interest rate risk	34,285

- Foreign exchange risk (including gold)	9,282
- Equity risk	17,536
<b>OPERATIONAL RISK</b>	
Capital requirements for Operational risk	
- Basic indicator approach	1,35,895

**Note:** - Capital requirement has been computed at 11.5% of RWA.

<b>Capital Adequacy Ratios</b>	<b>Consolidated</b>	<b>Standalone</b>
Common Equity Tier – 1 CRAR	14.10%	14.12%
Tier – 1 CRAR	14.50%	14.54%
<b>Total CRAR</b>	<b>16.49%</b>	<b>16.61%</b>

### III. RISK MANAGEMENT: OBJECTIVES AND ORGANISATION STRUCTURE

The wide variety of businesses undertaken by the Bank requires it to identify, measure, control, monitor and report risks effectively. The key components of the Bank's risk management rely on the risk governance architecture, comprehensive processes and internal control mechanism based on approved policies and guidelines. The Bank's risk governance architecture focuses on the key areas of risk such as credit, market (including liquidity) and operational risk and quantification of these risks, wherever possible, for effective and continuous monitoring and control.

#### Objectives and Policies

The Bank's risk management processes are guided by well-defined policies appropriate for various risk categories, independent risk oversight and periodic monitoring through the sub-committees of the Board of Directors. The Board sets the overall risk appetite and philosophy for the Bank.

The Committee of Directors, the Risk Management Committee and the Audit Committee of the Board, which are sub-committees of the Board, review various aspects of risk arising from the businesses of the Bank.

Various executive risk committees are mandated by the Risk Management Committee to look at individual components of risk as under:

Credit Risk Management Committee (CRMC)	Credit risk, counterparty risk
Asset Liability Management Committee (ALCO)	Liquidity risk, market risk, interest rate risk
Operational Risk Management Committee (ORMC)	Operational risk, people risk, process risk, technology risk
Central Outsourcing Committee (COC)	Outsourcing risk, vendor risk
BCP & Crisis Management Committee (BCPMC)	Continuity risk
Apex Committee	Risk based supervision submissions
Subsidiary Governance Committee (SGC)	Subsidiary governance
Information Security Systems Committee (ISSC)	Information security risk
Enterprise & Group Risk Management Committee (EGRMC)	Group level risk

The Bank has put in place policies relating to management of various kinds of risk (e.g.: credit risk, market risk, operational risk, information security risk, subsidiary risk and liquidity risk) for the domestic as well as overseas operations along with overseas subsidiaries as per the respective host regulatory

requirements and business needs. The overseas policies are drawn based on the risk perceptions of these economies and the Bank's risk appetite.

### **Structure and Organisation**

The Chief Risk Officer is the Head of the Risk department and reports to the Managing Director and CEO. The Risk Management Committee of the Board oversees the functioning of the Risk Department. The Department has separate teams for individual components of risk such as Credit Risk, Liquidity Risk, Market Risk (including Treasury Mid Office), Operational Risk, Enterprise Risk, Risk Analytics, Risk Data Management, Model Risk and Information Security Risk.

These teams report to the Chief Risk Officer.

## **IV. CREDIT RISK**

Credit risk refers to the deterioration in the credit quality of the borrower or the counter-party adversely impacting the financial performance of the Bank. The losses incurred by the Bank in a credit transaction could be due to inability or wilful default of the borrower in honouring the financial commitments to the Bank. The Bank is exposed to credit risk through lending and capital market activities.

### **Credit risk management policy**

The Board of Directors establishes parameters for risk appetite which are defined through strategic businesses plan as well as the Corporate Credit Policy. Credit Risk Management Policy lays down the roles and responsibilities, risk appetite, key processes and reporting framework. Corporate credit is managed through rating of borrowers and the transaction, thorough due diligence through an appraisal process alongside risk vetting of individual exposures at origination and thorough periodic review (including portfolio review) after sanctioning. Retail credit to individuals and small business is managed through definition of product criteria, appropriate credit filters and subsequent portfolio monitoring.

### **Credit rating system**

The foundation of credit risk management rests on the internal rating system. Rating linked single borrower exposure norms, delegation of powers and review frequency have been adopted by the Bank. The Bank has developed rating tools specific to market segments such as large and mid-corporates, SME, financial companies, microfinance companies and project finance to objectively assess underlying risk associated with such exposures.

The credit rating model uses a combination of quantitative and qualitative inputs to arrive at a 'point-in-time' view of the risk profile of counterparty. Each internal rating grade corresponds to a distinct probability of default over one year. Expert scorecards are used for various SME schematic products and retail agriculture schemes. Statistical application and behavioural scorecards have been developed for all major retail portfolios.

The Bank recognises cash, central/state government, bank and corporate guarantees, exclusive mortgage of properties and lease rental securitisation for the purpose of credit enhancement to arrive at a facility rating.

Model validation is carried out annually by objectively assessing the discriminatory power, calibration accuracy and stability of ratings. The Bank has completed the estimation and validation of PD, LGD and CCF models for corporate and retail portfolios.

### **Credit sanction and related processes**

The guiding principles behind the credit sanction process are as under:

- 'Know Your Customer' is a leading principle for all activities.
- The acceptability of credit exposure is primarily based on the sustainability and adequacy of borrower's normal business operations and not based solely on the availability of security.

The Bank has put in place a hierarchical committee structure based on the size and rating of the exposures for credit sanction and review; with sanctioning authority rested with higher level committees for larger and lesser rated exposures. Committee of Directors (COD) is the topmost committee in the hierarchy which is a sub-committee of the Board.

### **Review and monitoring**

- All wholesale bank credit exposures, once approved, are monitored and reviewed periodically against the approved limits. Borrowers with lower credit rating are subject to more frequent reviews.
- Credit audit involves independent review of credit risk assessment, compliance with internal policies of the Bank and with the regulatory framework, compliance of sanction terms and conditions and effectiveness of loan administration.
- Customers with emerging credit problems are identified early and classified accordingly. Remedial action is initiated promptly to minimize the potential loss to the Bank.

### **Concentration risk**

The Bank manages concentration risk by means of appropriate structural limits and borrower-wise limits based on credit-worthiness. Credit concentration in the Bank's portfolios is monitored for the following:

- Large exposures to the individual clients or group: The Bank has individual borrower-wise exposure ceilings based on the internal rating of the borrower as well as group-wise borrowing limits which are continuously tracked and monitored, while also adhering to regulatory limits stipulated by RBI such as the Large Exposure Framework.
- Concentration by Industry: Industry analysis plays an important part in assessing the concentration risk within the loan portfolio. Limits are set for certain individual industries based on the outlook and risk profile of these industries.

### **Portfolio management**

Portfolio level risk analytics and reporting to senior management examines optimal spread of risk across various rating classes, undue risk concentration across any particular industry segments and delinquencies. Borrowers or portfolios are marked for early warning when signs of weakness or financial deterioration are envisaged in order that timely remedial actions may be initiated. In-depth sector specific studies are undertaken on portfolios vulnerable to extraneous shocks and the results are shared with the business departments. The Bank has a well-defined stress testing policy in place and periodic stress testing is undertaken on various portfolios to gauge the impact of stress situations on the health of portfolio, profitability and capital adequacy.

Retail lending portfolio is composed of secured products (like mortgage, wheels business) which command a major share of the Consumer Lending Portfolio while the Bank continues to grow the unsecured lending book (personal loans and credit card business) albeit with prudent underwriting practice. The Bank has developed a robust risk management framework at each stage of retail loan cycle i.e. loan acquisition, underwriting and collections.

Underwriting strategy relies on extensive usage of analytical scoring models which also takes inputs from bureau. The Bank uses 'Rules Engine' which helps customise business rules thereby aiding in faster decision making without compromising on the underlying risks. Senior Management takes note of movement and direction of risk reported through information published on structured dashboards.

## Definitions and classification of non-performing assets

Advances are classified into performing and non-performing asset (NPAs) as per Master Circular- Prudential norms on Income Recognition, Asset Classification & Provisioning norms pertaining to advances dated April 02, 2024.

A non-performing asset (NPA) is a loan or an advance where;

- Interest and/or installment of principal remains overdue for a period of more than 90 days in respect of a term loan,
- The account remains 'out-of-order' for a period of more than 90 days in respect of an Overdraft or Cash Credit (OD/CC),
- The bill remains overdue for a period of more than 90 days in case of bills purchased and discounted,
- A loan granted for short duration crops will be treated as an NPA if the installments of principal or interest thereon remain overdue for two crop seasons,
- A loan granted for long duration crops will be treated as an NPA if the installments of principal or interest thereon remain overdue for one crop season,
- In respect of derivative transactions, the overdue receivables representing positive mark-to-market value of a derivative contract, if these remain unpaid for a period of 90 days from the specified due date for payment.
- Advances against term deposits, NSCs eligible for surrender, IVPs, KVPs and life policies are not be treated as non-performing, provided adequate margin is available in the accounts.
- The amount of liquidity facility remains outstanding for more than 90 days, in respect of a securitization transaction undertaken in terms of the RBI (Securitization of Standard assets) direction, 2021.
- In case of credit card account, if the minimum amount due, as mentioned in the statement, is not paid fully within 90 days from the print (payment) due date mentioned in the statement.
- In addition, an account may also be classified as NPA due to temporary deficiencies
  - a. The outstanding in the account based on drawing power calculated from stock statements older than three months, would be deemed as irregular. A working capital borrowal account will become NPA if such irregular drawings are permitted in the account for a continuous period of 90 days even though the unit may be working or the borrower's financial position is satisfactory.
  - b. An account where the regular/ ad hoc credit limits have not been reviewed/ renewed within 180 days from the due date/ date of ad hoc sanction will be treated as non-performing.
- Further, the account may also be classified as NPA due to DCCO criteria as per para 4.2.15 Projects under Implementation of Master circular on IRAC norms dated April 02, 2024.

NPAs are further classified into sub-standard, doubtful and loss assets based on the criteria stipulated by RBI. A sub-standard asset is one, which has remained a NPA for a period less than or equal to 12 months. An asset is classified as doubtful if it has remained in the sub-standard category for a period of 12 months. A loss asset is one where loss has been identified by the Bank or internal or external auditors or during RBI inspection and the amount has not been written off fully.

## Impairment of other assets

The carrying amounts of assets are reviewed at each balance sheet date to ascertain if there is an indication of impairment based on internal/external factors. An impairment loss is recognised

wherever the carrying amount of an asset exceeds the recoverable amount. The recoverable amount is the greater of the asset's net selling price and value in use.

### CREDIT RISK EXPOSURES

#### Total gross credit risk exposure including geographic distribution of exposure – position as on 30<sup>th</sup> September 2024

(₹ in millions)

	Domestic (Outstanding)	Overseas (Outstanding)	Total

Domestic	151,380	114,213	49,853
Overseas	5,317	5,317	4,438
<b>Total</b>	<b>156,698</b>	<b>119,530</b>	<b>54,291</b>

### Credit Risk: Use of Rating Agency under the Standardised Approach

The RBI guidelines on capital adequacy require banks to use ratings assigned by specified External Credit Assessment Agencies (ECAAs) namely CARE, CRISIL, ICRA, India Ratings, Acuite Ratings and Infomeric for domestic counterparties and Standard & Poor's, Moody's and Fitch for foreign counterparties.

The Bank is using issuer ratings and short-term and long-term instrument/bank facilities' ratings which are assigned by the accredited rating agencies viz. CARE, CRISIL, ICRA, India Ratings, Acuite Ratings and Infomeric published in the public domain to assign risk-weights in terms of RBI guidelines. In respect of claims on non-resident corporates and foreign banks, ratings assigned by international rating agencies i.e. Standard & Poor's, Moody's and Fitch is used. For exposures with contractual maturity of less than one year, a short-term rating is used. For cash credit facilities and exposures with contractual maturity of more than one year, long-term rating is used.

Issue rating is used if the Bank has an exposure in the rated issue and this would include fund-based and non-fund based working capital facilities as well as loans and investments. In case the Bank does not have exposure in a rated issue, the Bank uses the issue rating for its comparable unrated exposures to the same borrower, provided that the Bank's exposures are pari-passu or senior and of similar or lesser maturity as compared to the rated issue. Structured Obligation (SO) ratings are used where the Bank has a direct exposure in the 'SO' rated issue. If an issuer has a long-term or short-term exposure with an external rating that warrants a risk weight of 150%, all unrated claims on the same counterparty, whether short-term or long-term, also receive 150% risk weight, unless the Bank uses recognised credit risk mitigation techniques for such claims.

Issuer ratings provide an opinion on the general credit worthiness of the rated entities in relation to their senior unsecured obligations. Therefore, issuer ratings are directly used to assign risk-weight to all unrated exposures of the same borrower.

### Details of Gross Credit Risk Exposure (Fund based and Non-fund based) based on Risk-Weight – Position as on 30<sup>th</sup> September 2024

(₹ in millions)	
Particulars	Amount
Below 100% risk weight	1,10,25,107
100% risk weight	30,61,056
More than 100% risk weight	31,10,659
Deduction from capital funds	18,860

### V. CREDIT RISK MITIGATION

The Bank uses various collaterals both financial as well as non-financial, guarantees and credit insurance as credit risk mitigants. The main financial collaterals include deposits with banks, National Savings Certificate/Kisan Vikas Patra/Government securities/Life Insurance Policy and gold, while main non-financial collaterals include land and building, plant and machinery, residential and commercial mortgages. The guarantees include guarantees given by corporate, bank and personal guarantees. This also includes loans and advances guaranteed by Export Credit & Guarantee Corporation Limited (ECGC), Credit Guarantee Fund Trust for Small Industries (CGTIF), Central Government and State Government.

The Bank reduces its credit exposure to counterparty with the value of eligible financial collateral to take account of the risk mitigating effect of the collateral. To account for the volatility in the value of collateral, haircut is applied based on the type, issuer, maturity, rating and re-margining/revaluation frequency of the collateral. The Bank revalues various financial collaterals at varied frequency depending on the type of collateral. The Bank has a valuation policy that covers processes for collateral valuation and empanelment of valuers.

**Details of Total Exposure covered by eligible financial collateral as on 30<sup>th</sup> September 2024**

(₹ in millions)	
	<b>Amount</b>
Covered by:	
- Eligible financial collaterals after application of haircuts	5,79,749
- Guarantees/credit derivatives	2,00,592

**VI. SECURITISATION**

The primary objectives for undertaking securitisation activity by the Bank are enhancing liquidity, optimisation of usage of capital and churning of the assets as part of risk management strategy.

The securitisation of assets generally being undertaken by the Bank is on the basis of 'True Sale', which provides 100% protection to the Bank from default. The Bank has not sponsored any special purpose vehicle which is required to be consolidated in the consolidated financial statements as per accounting norms.

The Bank may also invest in securitised instruments which offer attractive risk adjusted returns. The Bank enters into purchase/sale of corporate and retail loans through direct assignment/SPV. In most cases, post securitisation, the Bank continues to service the loans transferred to the assignee/SPV. The Bank, however, does not follow the originate to distribute model and pipeline and warehousing risk is not material to the Bank.

Valuation of securitised exposures is carried out in accordance with the Fixed Income Money Market and Derivatives Association (FIMMDA)/RBI guidelines. Gain on securitisation is recognised over the period of the underlying securities issued by the SPV. Loss on securitisation is immediately debited to profit and loss account. The Bank also provides credit enhancement in the form of cash collaterals and/or by subordination of cash flows to senior pass through certificate holders. In respect of credit enhancements provided or recourse obligations (projected delinquencies, future servicing etc.) accepted by the Bank, appropriate provision/disclosure is made at the time of sale in accordance with AS-29 'Provisions, contingent liabilities and contingent assets'.

The Bank follows the standardized approach prescribed by the RBI for the securitization activities. The Bank uses the ratings assigned by various external credit rating agencies viz. CARE, CRISIL, ICRA, India Ratings, Acuite Ratings and infomeric for its securitisation exposures.

All transfers of assets under securitisation were effected on true sale basis. However, in the half year ended 30<sup>th</sup> September 2024 the Bank has not securitised any asset.

**A. Banking Book**

**VII. MARKET RISK IN TRADING BOOK**

Market risk is the risk of loss to the Bank's earnings and capital due to changes in the market level of interest rates, price of securities, foreign exchange rates and equities' price, as well as volatility risk in the option book. The Bank is exposed to market risk through its investment activities and also trading activities, which are undertaken for customers as well as on a proprietary basis. The Bank adopts a comprehensive approach to market risk management for its trading, investment and asset/liability portfolios. For market risk management, the Bank has:

- Board approved market risk policies and guidelines which are aligned to the regulatory guidelines and based on experiences gained over the years. The policies are reviewed periodically keeping in view regulatory changes, business requirements and market developments.
- Process manual which are updated regularly to incorporate and document the best practices.
- Market risk identification through elaborate mapping of the Bank's main businesses to various market risks.
- Statistical measures like Value at Risk (VaR), supplemented by stress tests, back tests and scenario analysis.
- Put in place non-statistical measures/limits on positions, gaps, stop loss, duration and option Greeks etc.
- Management Information System (MIS) for timely market risk reporting to senior management functionaries. Key risk metrics are presented to the Risk Management Committee of the Board through Risk Dash-Boards.

Risk limits such as position limits, stop-loss limits, alarm limits, gaps and sensitivities (duration, PVBP, option Greeks) are set up and reviewed periodically, based on a number of criteria including regulatory guidelines, relevant market analysis, business strategy, size of the investment and trading portfolio, management experience and the Bank's risk appetite. These limits are monitored on an intra-day/daily basis by the Treasury Mid-office and the exceptions are put up to ALCO and Risk Management Committee of the Board.

The Bank uses Historical Simulation and its variants for computing VaR for its trading portfolio. VaR is calculated and reported on a daily basis for the trading portfolios at a 99% confidence level for a one-day holding period, using 250 days of historical data or one year of relative changes in historical rates and prices. The model assumes that the risk factor changes observed in the past are a good estimate of those likely to occur in the future and is, therefore, limited by the relevance of the historical data used. The method, however, does not make any assumption about the nature or type

of the loss distribution. The VaR models for different portfolios are back-tested at regular intervals and the results are used to maintain and improve the efficacy of the model.

The VaR measure is supplemented by a series of stress tests and sensitivity analysis that estimates the likely behaviour of a portfolio under extreme but plausible conditions and its impact on earnings and capital. The Bank undertakes stress tests for market risks for its trading book, IRS, forex open position and forex gaps on a monthly basis as well as for liquidity risk at the end of each quarter. The Bank has built its capabilities to migrate to advanced approach i.e. Internal Models Approach for assessment of market risk capital.

### **Concentration Risk**

The Bank has allocated the internal risk limits in order to avoid concentrations, wherever relevant. For example, Aggregate Gap Limit, Net Open Position, daylight limits allocated across various currencies and Individual Gap Limits across currencies and maturities. Tenor wise duration limits have been set up for different categories within a portfolio. Issuer wise concentration limits are introduced in case of security portfolio. Within the overall PV01 limit, a sub-limit is set up which is not expected to be breached by trades linked to any individual portfolio. Some of the limits like currency wise net open position, stop loss limits and PV01 limits are allocated dealer-wise also, based on their skill and experience, to avoid buildup of positions in a single dealer's book.

### **Liquidity Risk**

Liquidity Risk means a Bank's inability to meet its current or future obligations on the due date. Liquidity risk is two-dimensional viz., risk of being unable to fund portfolio of assets at appropriate maturity and rates (liability dimension) and the risk of being unable to liquidate an asset in a timely manner at a reasonable price (asset dimension).

The goal of Liquidity Risk Management is to meet all commitments on the due date and also be able to fund new investment opportunities by raising sufficient funds in the form of increasing fresh liabilities or by expeditious asset sell-off without incurring unacceptable losses, both under normal and adverse conditions. These objectives are ensured by setting up policies, operational level committees, measurement tools and monitoring and reporting mechanism using effective use of IT systems for availability of quality data.

The Bank manages its liquidity on a static as well as dynamic basis using various tools such as gap analysis, ratio analysis, dynamic liquidity statements, intraday liquidity monitoring tools and scenario analysis. The Bank's ALM policy defines the tolerance limits for its structural liquidity position. The Liquidity Policy for the domestic operations as well as for the overseas branches lay down the operational framework for prudent risk management in the Bank. The liquidity profile of the Bank is analysed on a static basis by tracking all cash inflows and outflows in the maturity ladder based on the actual maturity and expected occurrence predicted through behavioral analysis - (for non-maturity items) of cash flows. The liquidity profile of the Bank is also estimated on a dynamic basis by considering the growth in deposits and loans, investment obligations, etc. for a short-term period of three months. The Bank undertakes behavioral analysis of the non-maturity products viz. savings and current deposits and cash credit/overdraft accounts on a periodic basis, to ascertain the volatility of residual balances in those accounts. The renewal pattern and premature withdrawals of term deposits and drawdown of unavailed credit limits are also captured through behavioral studies. The concentration of large deposits is monitored on a periodic basis.

The Bank's ability to meet its obligations and fund itself in a crisis scenario is critical and accordingly, liquidity stress tests are conducted under different scenarios at periodical intervals to assess the impact on liquidity to withstand stressed conditions. The liquidity positions of overseas branches are managed in line with the Bank's internal policies and host country regulations. Such positions are also reviewed centrally by the Bank's ALCO along with domestic positions.

The Bank has adopted the Basel III framework on liquidity standards as prescribed by RBI and has put in place requisite systems and processes to enable daily computation and reporting of the Liquidity Coverage Ratio (LCR).

### Counterparty Risk

The Bank has a Counterparty Risk Management Policy incorporating well laid-down guidelines, processes and measures for counterparty risk management. The policy includes separate counterparty rating models for domestic scheduled commercial banks, foreign banks, primary dealers, co-operative banks, small finance banks and payment banks for determining maximum permissible exposure limits for counterparties. The key financials, quality of management and the level of corporate governance are captured in the counterparty rating model. Counterparty limits are monitored and reported daily and internal triggers have been put in place to guard against breach in limits. Credit exposures to issuer of bonds, advances etc. are also monitored separately under the prudential norms for exposure to a single borrower as per the Bank's Corporate Credit Risk Policy or Investment Policy, as applicable. The counterparty exposure limits are reviewed at periodic intervals based on the financials of the counterparties, business need, past transaction experiences and market conditions. The Bank has also put in place the 'Customer Suitability & Appropriateness Policy for Derivative Products to guard against mis-selling. The corporate credit policy of the bank evaluates counterparty risk arising out of all customer derivatives contracts.

### Country Risk

The Bank has a country risk management policy containing the guidelines, systems and processes to effectively identify, assess, monitor and control its country risk exposures. Based on the risk profiling, countries are classified under seven categories i.e. insignificant, low, moderate, high, very high, restricted and off-credit. Risk profiling is based on the ratings provided by Export Credit Guarantee Corporation of India Ltd. (ECGC), Dun & Bradstreet, Standard & Poor's Banking Industry Country Risk Assessment (BICRA), inputs received from overseas branches/business departments, reports published by various agencies viz. Moody's, Standard & Poor's, Fitch and other publications of repute. The categorisation of countries is reviewed at quarterly intervals or at more frequent intervals if situations so warrant. An exposure to a country comprises all assets, both funded and non-funded, that represents claims on residents of another country. The Bank has in place both category wise and country wise exposure limits. The Bank monitors country risk exposures through a process of trigger limits as well as prior approval system for select categories viz. high, very high, restricted and off-credit to ensure effective monitoring and management of exposures. As a proactive measure of country risk management, Risk department issues 'Rating Watch' from time to time. Further, based on country-specific developments, the concerned business departments are provided updates on countries which have high probability of a rating downgrade.

### Risk Management Framework for Overseas Operations

The Bank has put in place separate risk management policies for each of its overseas branches in Singapore, Dubai and GIFT City (International Banking Unit). These branch-specific risk policies are based on the host country regulators' guidelines and in line with the practices followed for the Indian operations. The Asset Liability Management and all the risk exposures for the overseas operations are monitored centrally at the Central Office.

### Capital Requirement for Market Risk – Position as on 30<sup>th</sup> September 2024

(₹ in millions)

Type	Amount of Capital Required
Interest rate risk	34,285
Foreign exchange risk (including gold)	9,282
Equity position risk	17,536

## **VIII. OPERATIONAL RISK**

### **Strategies and Processes**

Operational Risk (OR) is the risk of loss resulting from inadequate or failed internal processes, people or systems, or from external events. The operational risk management policy documents the Bank's approach towards management of operational risk and defines the roles and responsibilities of the various stakeholders within the Bank and framework for 'identification, assessment, monitoring and mitigation of risk. The Bank also has a detailed framework for operational risk loss data collection, risk and control self-assessment and key risk indicators.

Based on the above policy the Bank has initiated several measures to manage operational risk. The Bank has put in place a hierarchical structure to effectively manage operational risk through the formation of several internal committees viz., Operational Risk Management Committee, Product Management Committee, Change Management Committee, Central Outsourcing Committee, Business Continuity Planning & Management Committee (BCPMC) and Information Security Systems Committee (ISSC).

### **Structure and Organisation**

The Risk Management Committee (RMC) of the Board at the apex level is the policy making body. The RMC is supported by the Operational Risk Management Committee (ORMC), consisting of Senior Management personnel, which is responsible for implementation of the Operational Risk policies of the Bank. This internal committee oversees the implementation of the OR framework and oversees the management of operational risks across the Bank. A dedicated operational risk management unit ensures management of operational risk. A representative of the Risk Department is also a permanent member of the Product Management and Change Management Committee (PMC/CMC).

### **Scope and Nature of Operational Risk Reporting and Measurement Systems**

A systematic process for reporting risks, losses and non-compliance issues relating to operational risks has been developed and implemented. The information gathered is being used to develop triggers to initiate corrective actions to improve controls. Critical risks and major loss events are reported to the Senior Management/ORMC.

The Bank has further enhanced its capability for effective management of operational risk with the implementation of an Enterprise Governance Risk and Compliance platform (SAS-EGRC).The IT platform acts as the single repository of processes and operational, compliance and financial reporting risks. It facilitates capturing of individual risks and the effectiveness of their controls, tagging of identified risks to processes and products, originates action plans and acts as a repository of all operational risk events.

### **Policies for Hedging and Mitigating Operational risk**

An Operational Risk Management Policy approved by the Risk Management Committee of the Board details the framework for managing and monitoring operational risk in the Bank. Business units put in place basic internal controls as approved by the Product Management Committee to ensure appropriate controls in the operating environment throughout the Bank. As per the policy, all new products are being vetted by the Product Management Committee to identify and assess potential operational risks involved and suggest control measures to mitigate the risks. Each new product or service introduced is subject to a risk review and sign-off process. Similarly, any changes to the existing products/processes are being vetted by the Change Management Committee.

Key Risk Indicators (KRIs) have been developed for various Business Units of the Bank for effective monitoring of key operational risks. KRIs for the branches has also been launched as a new initiative to help branches to manage operational risk better.

The Bank has adopted BCP and IT Disaster Recovery Policy wherein critical activities and system applications have been defined, recovery plan is in place for these critical activities and system applications to ensure timely recovery of the Bank's critical products and services in the event of an emergency.

Regular tests have been carried out to ascertain BCP preparedness. The test reports are shared with senior management on a regular frequency. Business Continuity Planning & Management Committee (BCPMC) has been formed comprising of senior functionaries of the Bank, which monitors BCM framework implementation in the Bank.

### Approach for Operational Risk Capital Assessment

As per the RBI guidelines, the Bank has followed the Basic Indicator Approach for computing the capital for operational risk for the period ending 30<sup>th</sup> September 2024.

### IX. INTEREST RATE RISK IN THE BANKING BOOK (IRRBB)

Interest Rate Risk in the Banking Book is measured and monitored in accordance with the guidelines laid out in the Bank's Asset Liability Management (ALM) Policy which is based on the RBI "Guidelines on Banks' Asset Liability Management Framework – Interest Rate Risk" dated 4<sup>th</sup> November 2010. Interest Rate Risk is measured in terms of changes in the value of interest rate sensitive positions across the whole bank i.e. both in the banking and trading books as described below.

The Bank measures and controls interest risk in the banking book using both Earnings at Risk (EaR) which assesses the sensitivity of its net interest income to parallel movement in interest rates over the 1 year horizon as well as Market Value of its Equity (MVE) which measures the sensitivity of the present value of all assets and liabilities to interest rate risk in response to given interest rate movements. The Bank prepares Interest Rate Sensitivity reports which are reviewed against Regulatory and Internal limits. Internal limits have been established for (a) Earnings at Risk for a 100 bps parallel shift in interest rates over the horizon of 1 year, and (b) 200 bps parallel shift in interest rates for Market Value of Equity impact. Any review of the internal interest rate risk limits is approved by the ALCO and is ratified by the Risk Management Committee of the Board.

Bucketing of non-maturity liability items for interest rate risk measurement is based on the behavioral analysis methodology for identification of core and non-core components. Bucketing rules of core and non-core portions in the interest rate sensitivity statements are laid out in the ALM policy. The Bank does not use any assumptions for prepayment of loans for preparation of interest rate risk sensitivity reports.

The findings of the various IRRBB measures are submitted to the ALCO, the committee for providing strategic guidance and direction for the ALM measures. Details of increase/(decrease) in earnings and economic value for upward and downward rate shocks based on balance sheet as on 30<sup>th</sup> September 2024 are given below:

### Earnings Perspective

(₹ in millions)

Currency	Interest Rate Shock	
	+200bps	-200bps
INR	63,117	(63,117)
USD	46	(46)
Residual	38	(38)
<b>Total</b>	<b>63,201</b>	<b>(63,201)</b>

**Economic Value Perspective**

(₹ in millions)

Currency	Interest Rate Shock	
	+200bps	-200bps
INR	28,526	(28,526)
USD	214	(214)
Residual	16,399	(16,399)
<b>Total</b>	<b>45,139</b>	<b>(45,139)</b>

Note: Interest Rate Risk in Banking Book is computed only for banks/bank like entities where the inherent business is maturity transformation of assets and liabilities, thereby resulting in interest rate mismatch. Other subsidiaries whose core business is not banking activity, IRRBB need not be computed.

**X. EXPOSURES RELATED TO COUNTERPARTY CREDIT RISK**

Counterparty credit limits and exposures are monitored daily and internal triggers are put in place to guard against breach in limits. Credit exposures to issuer of bonds, advances etc. are monitored separately under the prudential norms for exposure to a single borrower as per the Bank's Corporate Credit Risk Policy or Investment Policy, as applicable. The counterparty exposure limits are reviewed at periodic intervals.

**Methodology used to assign economic capital and credit limits for counterparty credit exposures**

The Bank currently does not assign economic capital for its counterparty credit exposures. The Bank has adopted a methodology of computing economic capital within the framework of Individual Capital Adequacy Assessment Process (ICAAP) and assesses the economic capital requirement within this framework. The Bank is adequately capitalized in terms of projected growth for the next three years and has sufficient capital buffer to account for Pillar II risks.

**Policies for securing collateral and establishing credit reserves**

The Bank has a policy framework through its Credit Risk Management policy and Collateral Management Policy which stipulates the eligible credit risk mitigants and management thereof. The Bank has adopted the Comprehensive Approach as suggested by RBI, which allows fuller offset of collateral against exposures, by effectively reducing the exposure amount by the value ascribed to the collateral. Under this approach, the Bank takes eligible financial collateral on an account-by-account basis, to reduce the credit exposure to counterparty while calculating the capital requirements to take account of the risk mitigating effect of the collateral. The Bank also has a well-defined NPA management & recovery policy for establishing credit reserves on a prudential basis apart from being in consonance with the regulatory guidelines.

**Policies with respect to wrong-way risk exposures**

Wrong way risk associated with counterparty credit exposures can be of two types – General i.e. when the PD of counterparties is positively correlated with general market risk factors and Specific i.e. when the exposure to a particular counterparty and the PD of the counterparty providing credit risk mitigation for the exposure are highly correlated. The Bank currently does not have a complete policy framework to address the wrong way risk. In the interim, the general wrong way risk is taken care of through monitoring of concentration of counterparty credit exposures on account of derivatives. Also as per the credit risk management policy, collaterals whose values have a material positive correlation with the credit quality of the borrower is likely to provide little or no credit protection during stress, are not recognized for credit enhancement, thus mitigating any specific wrong way risk.

### Impact of the amount of collateral the Bank would have to provide given a credit rating downgrade

The Bank currently assesses the liquidity impact and related costs of a possible downgrade as part of the bank-wide stress testing exercise. The Bank has already adopted Credit Value Adjustment (CVA) based on the regulatory guidelines on the asset side for capital computation purposes. The current regulatory guidelines do not require estimation of changes in collateral requirement in case of a likely rating downgrade of a Bank and the Bank also does not make such an assessment currently. However, the Bank is in the process of developing an internal methodology to estimate the changes in liabilities to counterparties in the event of its rating downgrade.

### Quantitative Disclosures

Bank has computed the exposure under Current Exposure Method for counterparty credit risk capital computation based on guidelines issued by RBI on "Bilateral Netting of Qualified Financial Contracts – Amendments to Prudential Guidelines" dated March 30, 2021.

The product-wise derivative exposures shown below are calculated using Current Exposure Method without taking netting benefits.

Particulars	(₹ in millions)	
	IRS/CCS/FRA/FUTURES	Options
Gross Positive Fair Value of Contracts	1,02,550	10,543
Netting Benefits	-	-
Netted Current Credit Exposure	1,02,550	10,543
Collateral held (e.g. Cash, G-sec, etc.)	3,958	-
Net Derivatives Credit Exposure	1,02,550	10,543
Exposure amount (under CEM)	4,58,985	22,860
Notional value of Credit Derivative hedges	-	-
Credit derivative transactions that create exposures to CCR	-	-

**XI. COMPOSITION OF CAPITAL**

(₹ in millions)

Sr.No.	Particulars	Amount	Reference No.
<b>Common Equity Tier 1 capital: instruments and reserves</b>			
1	Directly issued qualifying common share capital plus related stock surplus (share premium)	5,36,706	A1 + A2
2	Retained earnings	11,46,824	B1+B2+B3+B4+B5+B6+B7+B8

#### XV. EQUITIES – DISCLOSURE FOR BANKING BOOK POSITIONS

The risk oversight relating to the equity portfolio is part of the overall independent risk management structure of the Bank and is subjected to the risk management processes and policies approved by the Bank. In accordance with the RBI guidelines, investments are classified at the time of purchase as:

- Held to Maturity ('HTM');
- Available for Sale ('AFS');
- Fair Value through Profit and Loss (FVTPL) - Held for Trading ('HFT');
- Fair Value through Profit and Loss (FVTPL) – Non-Held for Trading ('Non HFT')
- Subsidiaries, Associates and Joint Ventures

Investments that the Bank acquires with an intent to hold till maturity i.e. with an objective to collect contractual cash flows; and the contractual terms of the investment give rise to cash flows that are solely payments of principal and interest on principal outstanding ('SPPI criterion') on specified dates, are classified under the HTM category.

The Bank classifies Investments as AFS where the investment is acquired with an objective which is achieved by both collecting contractual cash flows and selling securities; and the contractual terms of the investments meet the SPPI criteria.

Any investment held by the Bank for one or more of the following purposes is, when it is first recognised on its books, is designated as a FVTPL HFT:

- short-term resale;
- profiting from short-term price movements;
- locking in arbitrage profits; or
- hedging risks that arise from instruments meeting (a), (b) or (c) above

Investments in listed equities, trading-related repo-style transactions, instruments resulting from market-making activities, equity investments in a fund are included in FVTPL HFT category.

All other investments forming part of FVTPL category are classified as FVTPL Non-HFT.

Investments in the equity of subsidiaries/joint ventures/Associates are categorized under the category 'Investments in Subsidiaries, Associates and Joint Ventures' in accordance with the RBI guidelines.

Realised gains on investments under the HTM category are recognised in the Profit and Loss Account and subsequently appropriated to Capital Reserve account (net of taxes and transfer to statutory reserves) in accordance with the RBI guidelines. Losses are recognised in the Profit and Loss Account.

Upon sale or maturity of a debt instrument in AFS category, the accumulated gain/ loss for that security in the AFS-Reserve is transferred from the AFS Reserve and recognized in the Profit and Loss Account. However, in the case of equity instruments designated under AFS at the time of initial recognition, any gain or loss on sale of such investments is transferred from AFS-Reserve to the Capital Reserve.

The book value of the equity investments under banking book for quoted and unquoted securities is ₹12,094 million and fair value is ₹13,020 million as per the regulatory scope of consolidation. Equity investments under banking book are in the nature of quoted and unquoted securities. The cumulative realised losses arising from sale and liquidation of these securities in the reporting period is ₹60 million. The total unrealised gains from equity investments under banking book is ₹925 million and the total latent revaluation gain of these outstanding securities is NIL.

Of the above, the amount included in Tier 1 and/or Tier 2 capital is ₹60 million. The capital requirement @11.5% of RWA on the equity investments under banking book is ₹2041 million. The book value of equity investments in insurance subsidiaries is deducted from capital as per the master circular on Basel III regulations.

**XVI. COMPARISON OF ACCOUNTING ASSETS AND LEVERAGE RATIO EXPOSURE MEASURE**

		(₹ in millions)
	Item	Amount
1	Total consolidated assets as per published financial statements	1,55,22,224
2	Adjustments for investments in banking, financial, insurance or commercial entities that are consolidated for accounting purpose but outside the scope of regulatory consolidation	
3	Adjustments for fiduciary assets recognized on the balance sheet pursuant to the operative accounting framework but excluded from the leverage ratio exposure measure
